PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3+ years shipping production systems across fintech, CRM, and IoT platforms. Specialize in Node.js, TypeScript, React/Next.js, and PostgreSQL, with hands-on experience across AWS, Docker, and CI/CD pipelines. Built a Business Rule Engine integrating third-party APIs, real-time analytics pipelines (Apache Flink, StarRocks), and automated workflows (n8n) to improve reliability and cut manual effort. Comfortable owning features end-to-end – from database schema design to production deployment – and use AI tooling (Claude, GitHub Copilot) to move faster without cutting corners.

TECHNICAL SKILLS

Backend: Node.js, NestJS, Go, .NET C#, REST API, GraphQL
Frontend: React, Next.js, Vue.js, Material-UI, Tailwind CSS
Databases: PostgreSQL, MySQL, MongoDB, Redis
ORM & Migration: Prisma, database role management, schema migrations
Languages: JavaScript, TypeScript, Go, SQL, C#
Cloud & DevOps: AWS (SQS, EC2, RDS), Azure, Docker, GitLab CI/CD, Nginx
Automation: n8n (self-hosted workflow automation, webhook integrations, PDF reporting pipelines)
AI & Productivity: Claude, GitHub Copilot – used for code generation, debugging, and documentation
Familiar With: Apache Flink, StarRocks, MQTT, RBAC/ABAC
Industry Expertise: FinTech, Enterprise CRM & SaaS, IoT, and Retail Technology

WORK EXPERIENCE

Software Development Engineer 1 (SDE-1)

NovoStack

October 2025 – Present

Noida, Uttar Pradesh, India

- Onboarded to Ruloans CRM, performed codebase cleanup and implemented Role-Based Access Control (RBAC) to improve security and maintainability
- Worked on HelloTrade, a fintech loan aggregator product by IndiaMart; built the Bureau BRE (Business Rule Engine) integrating the Experian credit bureau API with FCS Long Auth Flow, masked mobile verification, and OTP infrastructure
- Optimized React application performance through code splitting, lazy loading, and image optimization, improving page load metrics
- Implemented and managed AWS SQS FIFO queues for asynchronous task processing and service decoupling
- Administered PostgreSQL databases – managed roles and permissions, ran ALTER TABLE migrations, configured default privileges, and handled data migrations between production and development environments
- Set up and troubleshooted Docker Compose environments for NestJS + Redis services on Ubuntu and Rocky Linux servers
- Configured GitLab CI/CD pipelines for automated deployments via jump-server to internal infrastructure
- Worked on Go microservices including AWS SQS integration and IAM role debugging on EC2
- Leveraged AI coding tools (Claude, Copilot) to accelerate feature development, generate boilerplate, and debug complex integration issues faster

Jr. Software Engineer

Spraxa Solutions Pvt. Ltd.

March 2023 – September 2025

Noida, Sector 62

- Worked on CoolR, an IoT-based retail management platform, and contributed to an internal development framework used across Spraxa projects
- Built Excel data import feature for CoolR to support faster client onboarding and easier data migration
- Improved API performance by refining SQL queries and database interactions; contributed to BackStorage replenishment algorithm for inventory management
- Integrated Azure AD authentication to enhance security and enable SSO capabilities
- Assisted in setting up Apache Flink pipeline to sync data with StarRocks for near real-time analytics
- Adopted AI-assisted development practices to improve code review turnaround and documentation quality
- Debugged and resolved production issues, contributing to improved application stability

PROJECTS

WAC CSD Scan – Canteen Operations & Scanning App

[Google Play](#)

- Built a utility app for canteen staff to manage damage reports, stock-taking, and staff billing
- Implemented product-scanning flows enabling customers to identify products in-store
- Built with Node.js and PostgreSQL; published live on Google Play

HelloTrade – Fintech Bureau BRE Engine

[NovoStack / IndiaMart](#)

- Built FCS Long Auth Flow integrating Experian API with masked mobile verification and OTP-based authentication for loan aggregation workflows
- Reduced frontend load times through React lazy loading, code splitting, and image optimization
- Implemented AWS SQS FIFO queue-based async processing for loan application workflows
- Managed Prisma ORM migrations and PostgreSQL schema changes in production environments

Auto Analytics Pro – Vehicle Registration Analytics Platform

[autoanalyticspro.com](#)

- Built a B2B SaaS analytics platform powered by India's official VAHAN vehicle registry, tracking 4.8 Cr+ registrations across 35 states and 1,400+ RTO offices
- Implemented geo-intelligence dashboard with interactive India choropleth, year-on-year trend analysis, manufacturer market share tracking, and state/RTO drill-downs
- Designed for dealers, OEMs, and fleet operators; provides real-time market data without maintaining custom scraping or ETL pipelines

NovoHR – HRMS System

[novohr.therohankumar.com](#)

- Designed and built a Human Resource Management System with Next.js 14+ frontend and Go/Fiber backend, backed by PostgreSQL
- Implemented core HR modules including employee management, role-based access control, and attendance tracking
- Structured as a full-stack monorepo with API-first design, supporting multi-role access for HR admins and employees

SemSearch – Semantic Document Search Engine

[semsearch.therohankumar.com](#)

- Built a semantic document search engine using HyDE (Hypothetical Document Embeddings) to improve retrieval accuracy by generating hypothetical answers prior to vector similarity search
- Integrated a vector database for dense retrieval across uploaded documents, enabling natural language querying over large corpora
- Used Gemini API to generate concise AI-powered summaries of top retrieved results, reducing time-to-insight for end users

Beat Music – Discord Music Bot

Personal Project

- Built a Kotlin-based Discord music bot deployed to 200+ servers with audio filters including Echo and Reverb
- Designed architecture to handle concurrent music streaming across multiple Discord servers

jikan-api.js – NPM Package

Personal Project

- Created a TypeScript wrapper for the Jikan API with type-safe interfaces, error handling, and full endpoint coverage
- Published as an NPM package with 5,000+ weekly downloads, active community usage, and detailed documentation

EDUCATION

Manipal University Jaipur

Remote

Master of Computer Applications (MCA)

2025 – Present

Indira Gandhi National Open University

Remote

Bachelor of Computer Applications (BCA)

Jul 2019 – Dec 2024

CERTIFICATIONS & ACHIEVEMENTS

Award: Tackling Challenges with Confidence

Spraxa Solutions Pvt. Ltd. – 2024

Supervised Machine Learning: Regression and Classification

Coursera – Jan 2023
